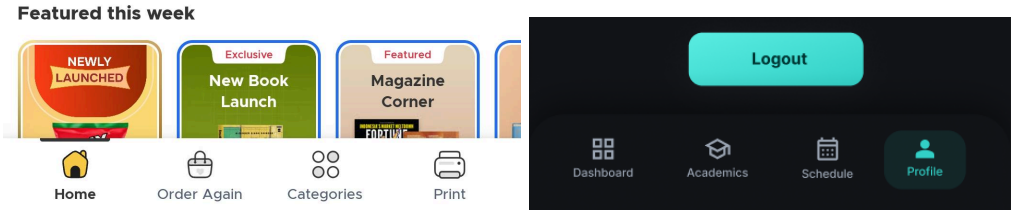
Task 2

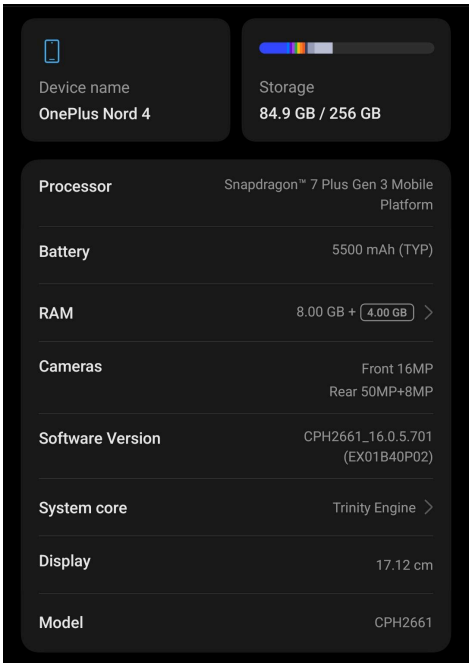
1. **Figma Wireframes and Mock UI -** https://www.figma.com/design/LKN8P2XtqTyZN7jRVfUKcx/DassTrial?node-id=0-1&t=mrWbSnlAGi4Ong8W-1
2. **Design inspirations:**
   a. Google Forms Builder:
   For the customisable forms where we can create the form took google forms builder as a UI inspiration
   Google forms (left) vs Design on figma (right)

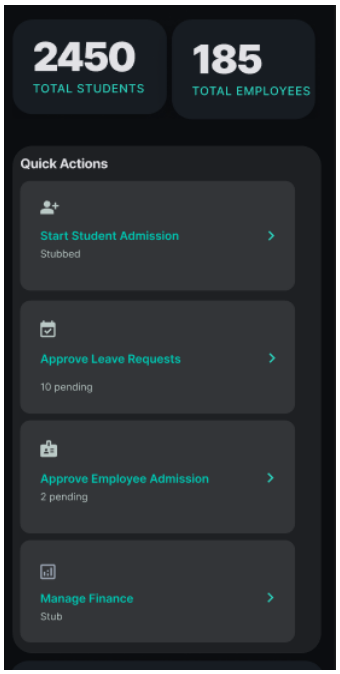
   b. Blinkit
   For the bottom tab based navigation took inspiration from Blinkit make easy to access short cut access tabs (Saw how neat 4 icon tab bar looked and took inspiration is for all roles apps to have short cut access tabs with 4 neat icons



c. OxygenOS

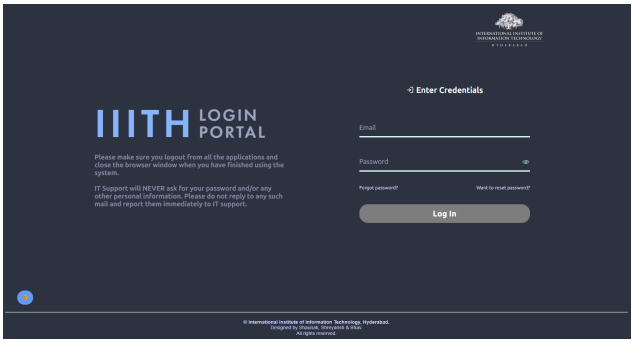
For the overall theme, rounded cards showing subtle elevations , the stock android layouts were inspired from the OxygenOS 15 theme (As both teammates are OnePlus users so familiar with this UI)

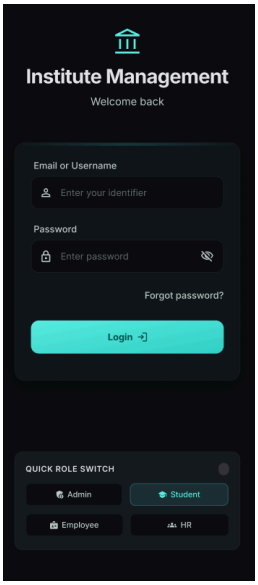




d. <u>Login.iiit (MINOR INSPIRATION)</u>

For the color scheme we tried to replicate the refurbished login.iiit screen for the dark theme with blue accent. But it was a minor inspiration as we later changed the blue to a slightly brighter blue which gave the app more life.





3. **Usability principles from class directly applied in design**
    a. Consistency
    We have tried to ensure the theme, typography, card style, icons etc stay consistent throughout the UI.
    b. Usable shortcuts:
    All of the most used features in each role are provided as a shortcut tab at the bottom of the screen.
    Student: Dashboard, Profile, Schedule, Academics
    Employee: Dashboard, Profile, Leave, Payroll
    HR: Dashboard, Profile, Approve Leave, Approve Payroll
    Admin: Dashboard, Profile, Student, Employee
    c. Yield closure:
    For important decision like the Employee leaving the organisation/campus and initiating offboarding process we have made a confirmation screen where we warn the user that this is a irreversible task hence yielding closure on an irreversible important task
